JUBOSILHYDROPHOB is a transparent impregnating agent based on oligomeric siloxanes and organic solvents.

· **Process category PROC10** Roller application or brushing

· **Environmental release category ERC10a** Widespread use of articles with low release (outdoor)

· **Application of the substance / the mixture**

JUBOSILHYDROPHOB is used as a basic or additional water repellent protection of all types of mineral decorative renders, mineral façade paints, façade brick, unplastered concrete surfaces, natural and artificial stone, as well as fibre-cement and other façade boards.

It penetrates into the surface well, it does not reduce its water vapour permeability and it does not change its colour or it changes it to the minimum degree. It substantially increases or improves its water repellency and thus efficiently impedes the development of wall algae and mould, it increases its resistance to freezing and reliably protects it against excessive absorption of dirt, desalting, chemical corrosion, etc.
